## Caldera and Durst to collaborate in order to supply more value to the UV large format printing activities

**caldera**eu

 **durst**

Caldera, the award winning French leading software editor specialised in large format printing solution and Durst Phototechnik, a leading provider of wide-format inkjet printers announce a partnership in order to provide added value solutions for large format printing activities.

By this alliance, Durst will be able to propose to its users workflow printing solutions based on Caldera GrandRIP+ package to run their Durst Rho printer series.

“Durst printers represent the state of the art in UV printing technology and we are naturally committed to support these printers in our production workflow solutions” says Joseph Mergui, General Manager of Caldera Graphics. “We are very proud to be chosen as the preferred RIP to be proposed to Durst users. This is a direct effect of our global commitment to bring more value to the market than any other similar solution”.

Durst Phototechnik manufactures large-format imaging machines utilizing both photo and inkjet

technology in two factories, one in Brixen, Italy and the other in Lienz, Austria. The internationally renowned company, which exports to over 120 countries around the globe, has been active in the field of picture reproduction since 1936. It revolutionized the photo-world with the “Lambda” large format laser imaging device and, since 2001, Durst has produced UV inkjet printers. Once again, it became the innovative market leader with several “firsts” including the first company to offer a white ink printing option as a fifth colour and a special effect varnish, to name but two. Caldera GrandRIP+ package was recently awarded by the DPIA (Digital Printing & Imaging Association) “product of the Year” in the RIP package category.
